

Assai Viewport

Insight Across Engineering Systems

Find what matters. Understand what's missing. Connect what's disconnected. Assai Viewport gives engineering and operations teams a unified view of asset information across systems, formats, and disciplines. It links documents, tags, drawings, 3D models, and real-time data, making it easier to search, navigate, and act with full context.

About us: Assai delivers AI-powered intelligence for industries, turning fragmented engineering data into a single source of truth. Trusted worldwide, the platform improves search, traceability, and data quality to accelerate decisions, reduce risk, and ensure compliance, helping organizations protect margins and turn complexity into competitive advantage.

What it enables

- Detect inconsistencies before they delay commissioning or impact operations.
- Accelerate access to critical data across teams and systems.
- Improve visibility by linking drawings, tags, and sensor data in one view.
- Strengthen data quality by flagging missing or conflicting information.
- Find fast, with search across many systems and file types.
- Extract value from scanned documents and legacy data through automated recognition.

Integration

Supports integration with a wide range of engineering and asset management systems. Integrates with a wide range of leading enterprise systems.

Deployment

Cloud-native, with on-premises deployment available.

Assai Viewport is available as a stand-alone solution or as part of Assai Enterprise.

Where Assai proves its value for customers

- Bringing maintenance and engineering data together increased asset visibility by fifty percent for a major utility.
- Consolidating maintenance and production data cut search time by sixty percent for a global chemical producer.
- Unifying millions of technical records reduced document retrieval time by seventy percent for a leading manufacturer.
